WHAT IS FOOD HYGIENE?

At the centre of it all is HACCP

Hazard Analysis and Critical Control Points [HACCP] is a guideline for ensuring hygiene safety in food processes. The guideline analyzes possible chemical, physical, and biological hazards within processes that should prevent unsafe food from leaving the Critical Control Point (CCP) zone.

WHAT IS A FOOD HYGIENE TOOL?

Impervious to the elements

Hygiene cleaning tools for the food industry need to be moisture resistant, stand up to chemical cleaners, and/or autoclaving.

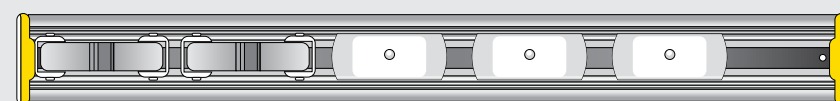

COLOUR CODED SYSTEM

- blue
- green
- red
- white
- yellow

HACCP can be implemented in any food sector from food service to transportation. It encompasses a field-to-fork approach. Colour coded hygiene tools provide clarity and control by monitoring CCP zones for specific approved colour coded tools.

Extruded aluminum wall hanger [HD10]

black: is typically reserved for cleaning drains.

To start a HACCP program we recommend you first invest in high quality tool holders and environmental signs in order to advertise CCP zones.

GENERAL CONSTRUCTION

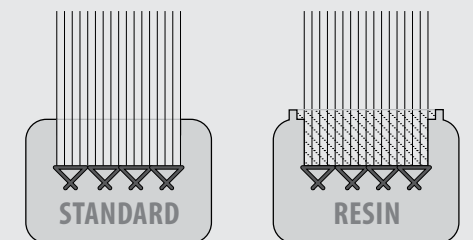

Wooden blocks or wooden handles are not appropriate construction materials for food production. Wood is porous and a prime material to support microbial growth. Plastic cleaning tools are a good choice but ensure they are polypropylene plastic for resistance to chemicals, heat, and humidity.

FIBRE QUALITY

Polyester fibres are ideal for food processing applications because they have a high melt point, low water absorption factor and excellent tensile strength. A well balanced tool has good sweeping and scrubbing characteristics.

FIBRE RETENTION

General purpose cleaning tools use untreated steel staples that become corroded over time causing fibres to fall out and contaminate the food product. Food hygiene tools use stainless steel corrosion proof staples so fibres stay locked into place, reducing the risk of contamination. If eliminating all sources of contamination is a concern you should consider resin set tools. These tools ensure there is no room whatsoever for microbial growth. The extra fibre retention process ensures fibres remain firmly attached to the stainless steel staples within the polypropylene high impact plastic block.

Standard construction is stainless steel staple set. Optional construction includes stainless steel staples plus injection molded resin. This option is available upon request.

PUSH BROOMS

Fine, medium & coarse sweeping

Use these push brooms to sweep up dirt and debris from large unobstructed areas.

FINE

The extra fine fibres sweep up raw ingredients such as flour with ease. Deep recessed fine threads provide the perfect fit to one of our Euro-style handles.

item	colour	size [in.]	trim [in.]	pack
B896B	blue	18	2¼	4
B896G	green			
B896R	red			
B896W	white			
B896Y	yellow			

MEDIUM

This broom does it all. It's the general purpose broom suitable for cleaning a wide range of floor surfaces and debris from the food manufacturing process.

item	colour	size [in.]	trim [in.]	pack

EUROTHREAD

UPRIGHT BROOMS & SHOVELS

Sweep & scoop

Upright angled brooms and shovels work well as partners in cleaning small areas and getting into corners.

UPRIGHT ANGLE BROOMS

These handy angle brooms easily fit into tight spaces at just 9 in. wide. Stiff bristles are heat-fused into a high-impact plastic block, ensuring less fibre loss and less chance of bacteria finding nooks and crannies to grow in. Available in red, blue, green and yellow to aid in the implementation of HACCP programs.

Use any acme-thread handle with these broom heads. For food prep or processing areas, we highly recommend a non-wood handle such as an aluminum handle with an acme threaded nylon tip.

522	green		
523	red		
520	yellow		

ACMETHREAD

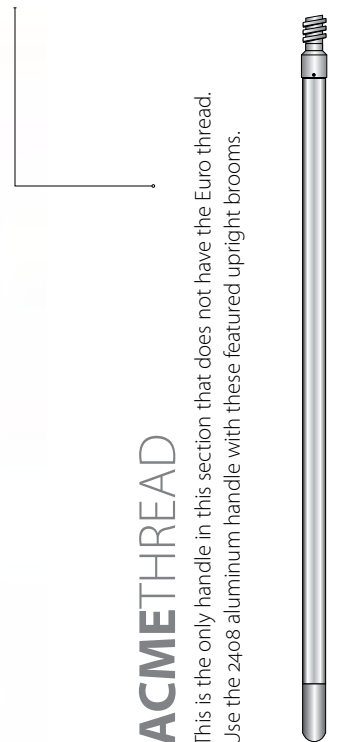

ONE-PIECE SHOVEL

These sturdy polypropylene shovels are moulded in one piece, making them virtually impervious to any type of bacterial growth. The overall length is 44-inch and the blade is 14-inch wide – perfect for moving large amounts of dry goods (flour, spices, grains, etc.)

D-GRIP SHOVEL

A two-piece constructed shovel made of smooth, impact-resistant polypropylene. Overall length is 41 in. and the blade is 12 in. wide. Light and easy to handle.

ACMETHREAD

This is the only handle in this section that does not have the Euro thread. Use the 2408 aluminum handle with these featured upright brooms.

SCRUBBING

Scrub small areas

These tools have coarse fibres to effectively clean tiled floors or vertical surfaces with grout lines.

FLOOR SCRUB

This small broom has firm short trim with the power to loosen and scrub engrained dirt on hard surfaces. Excellent for cleaning grouted tiles with an aggressive scrubbing action.

ST11

ST12

GROUT & SWIVEL

These very coarse brushes offer the deepest scrubbing action for cleaning grouted tiles on walls or floors. Both brushes have a 360° articulating head to maintain contact with the floor while scrubbing. The ST11 has a tapered brush profile for extra deep grout cleaning.

item	colour	size [in.]	trim [in.]	pack
ST12	blue	9½	1	12
ST11	blue		7/8	

DUAL SCRUB, CLEAN HIGH OR LOW

The dual angle profile of this broom gets into corners and is the tool to clean vertical surfaces efficiently. The profile can also get under equipment to clean those hard to reach areas.

FLOOR SQUEEGEES

Dual moss rubber

FDA approved, closed cell moss rubber repels water and other liquids preventing bacteria from harbouring inside the squeegee. The rubber is non-marking, non-toxic and is resistant to vegetable oils and animal fat by-products. Great for cleaning textured floors.

EUROTHREAD

All materials used in our squeegees are FDA-approved materials: the green natural rubber, with all components conforming to FDA 21 CFR, including the frame.

The green coloured rubber is especially developed for the hygiene markets. Surgical green is distinctive and hygienic.

FDA RUBBER SQUEEGEES

These floor squeegees are made to last with a high impact polypropylene channel and closed-cell moss rubber blade which conforms to irregularities in flooring (such as grout lines) to move liquid smoothly and leave floors virtually dry.

TWISTED-IN-WIRE BRUSHES

For cleaning process pipes

These twisted-in-wire (TIW) tube brushes effectively clean process hoses and pipes. Choose the closest diameter brush to the pipe you wish to clean.

TIW SNAKES

Designed to clean hoses and pipes up to 120 inches in length. These stainless steel (corrosion resistant) steel snakes are filled with medium/coarse polyester fibre and can be cut to desired length.

UTILITY BRUSHES

Cleaning equipment

These brushes have the fibre strength to quickly clean processing equipment and mixing tanks.

SHORT HANDLE

With a 10 inch curved handle, this utility brush provides a little extra reach for jobs that require hand scrubbing, such as cleaning walls or countertops. An excellent all-round tool, featuring an aggressive 1¼ inch polyester fibre.

TOOL HOLDER

Store your tools with confidence and pride

Hang your food hygiene tools to keep them out of contact with potentially contaminated surfaces and keep your workplace organized.

HOOKS & GRIP COMBO

This 20 inch wide aluminum tool holder with 3 hooks and 2 rubber-grip handle holders is exceptionally sturdy. The rubber grips adjust to fit variable width handles or tools, and can support the heaviest of wet mops or tools without slippage.

GRIPS

Equipped with 5 rubber handle grips in a 20 inch wide aluminum track, this hanging unit is customizable with all colours of end cap supplied, making it easy to segregate tools according to HACCP.

item	grips & hooks	pack
