

Bright orange fibres, connector, and brace offer high visibility.

firefly™ push brooms

Use this broom around moving equipment when high visibility is an important safety issue for an employee or work crew. The fibres, connector and brace are orange to coordinate this product in a retail environment. The 18- and 24-inch versions have two different mixes of fibres combined into one block to produce a medium sweeping action. Use on even surfaces found indoors such as loading docks and outdoors on uneven surfaces found in construction sites.

sweep-n-scrape

This is a 4-season broom. The galvanized scraper blade cuts through mud and snow in the spring and fall. During winter, the blade can be used to remove compacted snow from a driveway and the occasional buildup of ice without using a separate tool. To use the scraper, just flip the broom over and the blade is angled correctly. The coarse fibres have the strength to push larger debris while sweeping sidewalks and driveways.

features and benefits

- Orange fibres are highly visible and oil and solvent resistant.
- Steel brace eliminates shearing stresses that wear out the threads and cause the handle to break off.
- Bolt-on handle is reversible to promote even wear of the fibres.
