

Clean irregular surfaces
with the flexi-scrub

flexi-scrub

flat-mop flexible tool

Cleaning a curved surface is challenging because most tools are not designed to conform to the shape of the surface being cleaned. The flexi-scrub contours to fit irregular surfaces such as acrylic tub surrounds and shower stalls, providing more efficient cleaning. The all-synthetic construction with no metal parts allows it to be used on MRI equipment and won't scratch surfaces. A cut-end cotton pad or a general purpose damp microfibre pad are your choices for this tool.

features and benefits

- The double locking collar accepts a wide range of handles that are either acme thread or plain end. Popular handles include non-conductive fibreglass or wood and telescopic aluminum extension poles.
- All-synthetic frame contours to irregular and hard to reach surfaces reducing strain on the user.
- Velcro® applicators are easy to install. Scrubbers include the economical cut-end cotton for general washing or our microfiber flat-mop for maximum pick up.
